

## Convert Boiler Plate Text

There is an extension to the webservice CONVERT\_BOILERPLATETEXT with new parameters added.

The existing parameters were ID1, ID2, html & Text. Type, ID1 & ID2 can still be used (left in for any job using them) but new parameters have been added:-

person, vacancy, placement, progress, company, employment, shifts, brand, consultant, contactevent (not with ID1 & ID2 or type) e.g. <StaticFunction service="CONVERT\_BOILERPLATETEXT" person="{bpt\_personid}" html="No" text="{BPTText}"/>

**Note** in all of these examples the text parameter MUST come last.
